What is next?

Arizona Electronic Transaction Act AETA (HB2069)

Secure electronic signatures

A signature is a secure electronic signature if, through the application of a security procedure, it can be demonstrated that the electronic signature at the time the signature was made was all of the following:

- Unique to the person using it.
- Capable of verification.
- Under the sole control of the person using it.
- Linked to the electronic record to which it relates in such a manner that if the record were changed the electronic signature would be invalidated

Secure electronic records

If, through the application of a security procedure, it can be demonstrated that an electronic record signed by a secure electronic signature has remained unaltered since a specified time, the record is a secure electronic record from that time of signing forward.

What is next?

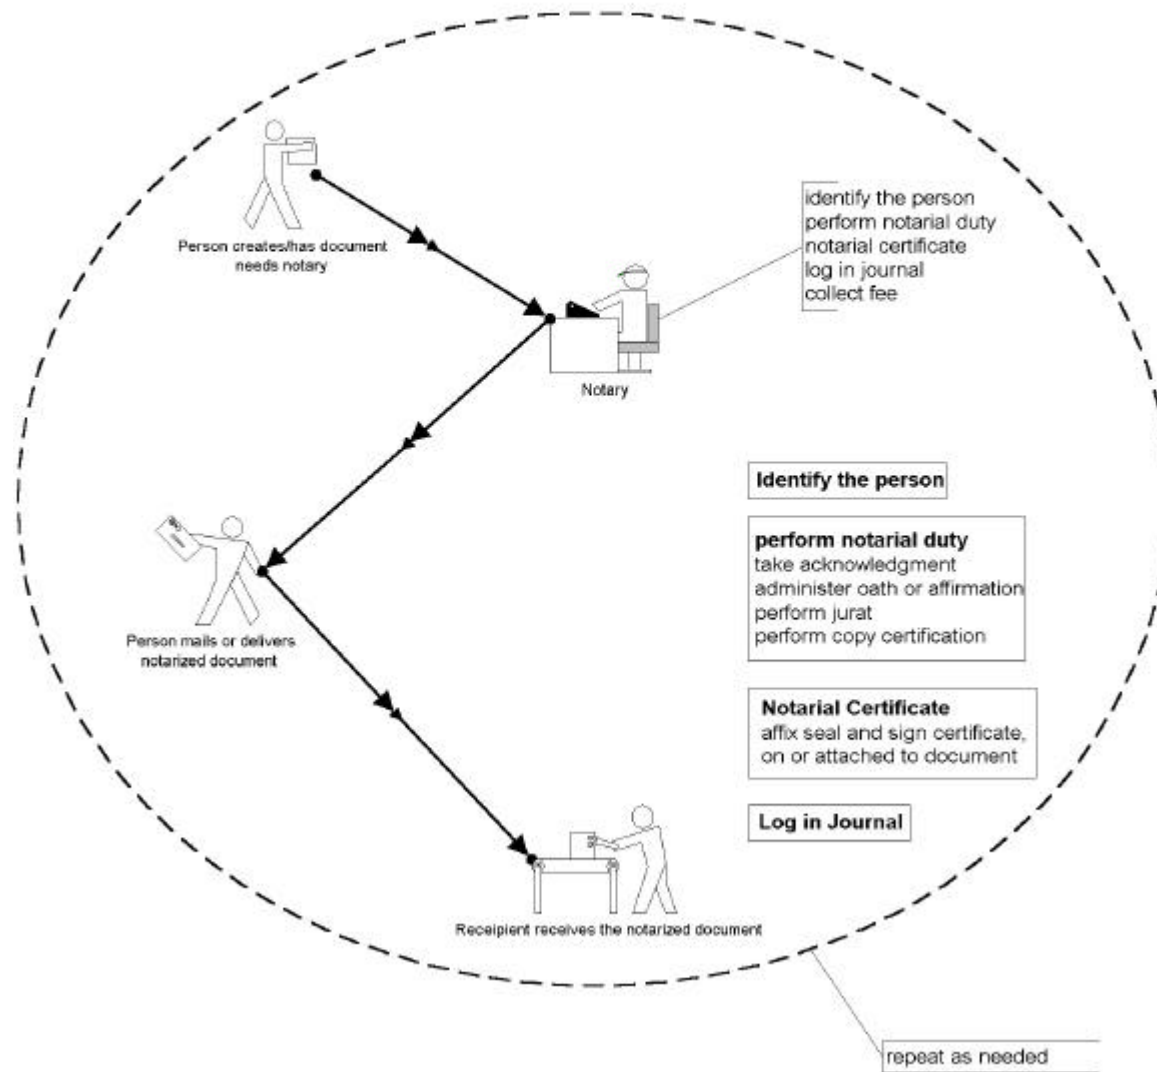

Electronic Notary Act (HB 2622)

Establishes the recognition of electronic notarial acts as equivalent to “traditional” notarial acts. Defines electronic notarial processes.

(Will require Administrative Rules, etc.
before commissioning e-notaries.)

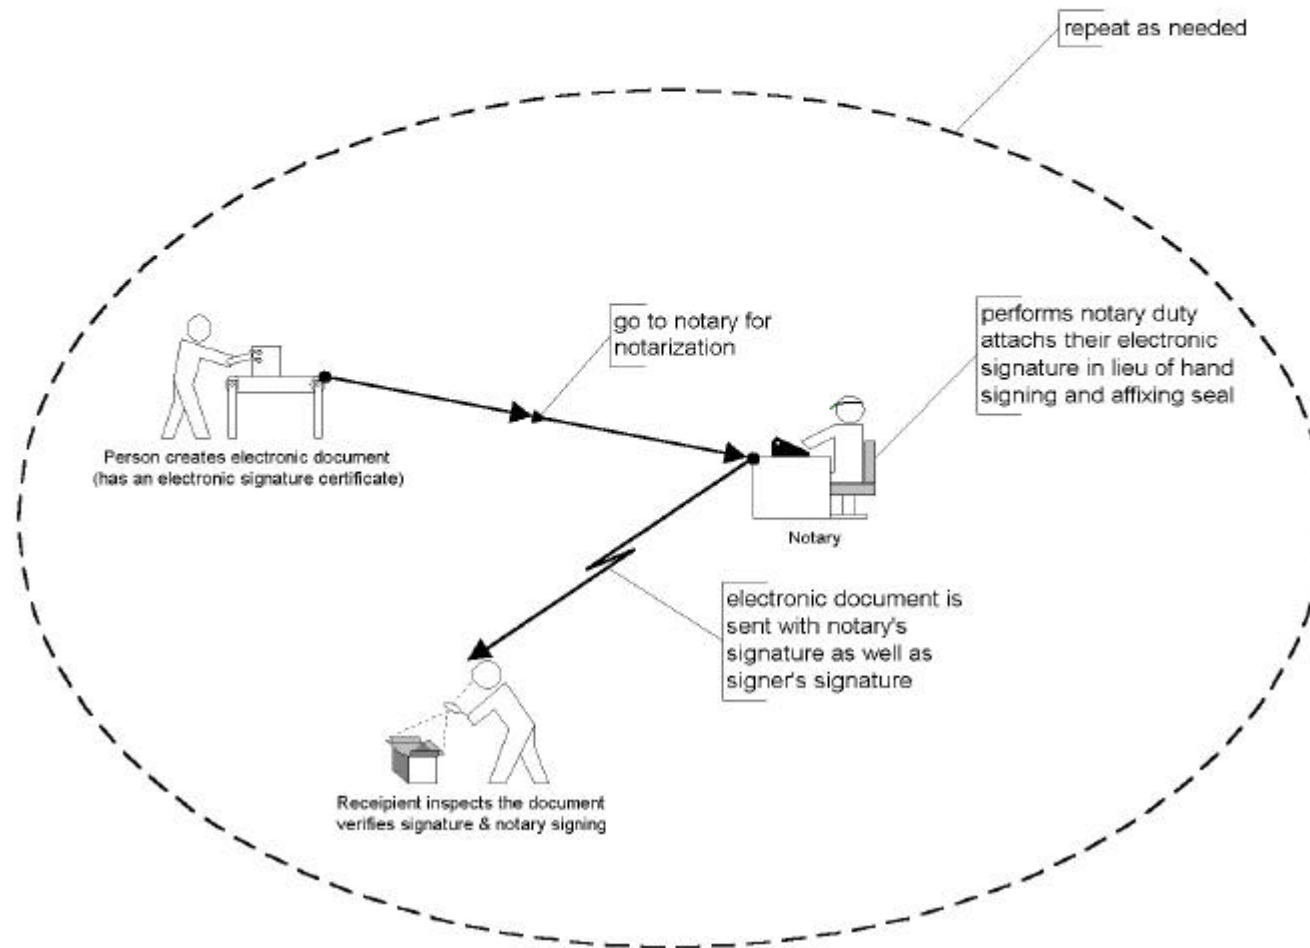

What is next?

Notary Process

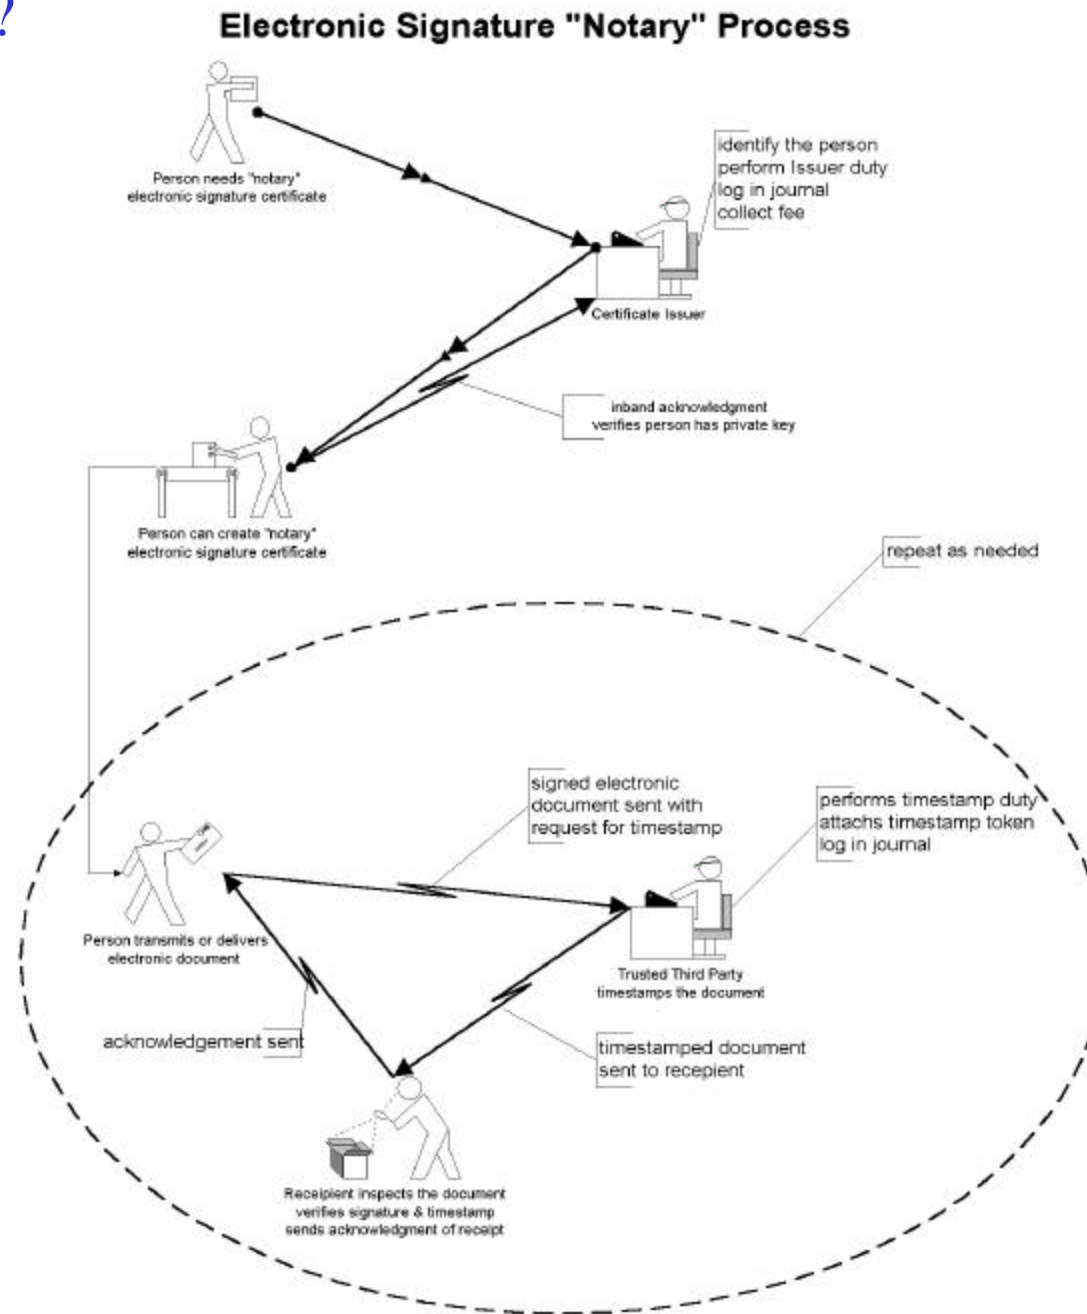

What is next?

Notary Electronic Signature Process (Utah model)

What is next?

What is next?

Having e-notaries creates an interesting business model.

Suppose we:

- commission e-notaries and
- create web-based forms.

A person could:

- go to a e-notary counter (state or private),
- complete an on-line form (counter computer or kiosk),
- place their mark (sign),
- the e-notary notarizes and
- transmits the electronic form,
- we process a signed, electronic form.

No paper and minimizes state manual processing.

What is next?

Electronic Records Archival Research Initiative

Documents and records *created* electronically
will become increasingly
more common and more important
to state government.

Archiving documents
where *any* paper or film version is a copy
will require attention to how it is formed
to assure it's integrity is maintained
through the full life cycle of the document.

What is next?

Remember

You are reinventing a business process.

Do not assume anything,
think through the entire new process.
